Let me start this off by saying that the idea for the BitLicense was good, trying to rein in the Wild West of the crypto industry during a time when people were getting scammed left & right. However, the execution of the said license hasn't been helpful to the industry at all. You say you want to be more efficient when it comes to the cryptocurrency industry which "reflects the realities of an evolving market." I suggest that you just copy EVERYTHING that was implemented in the State of Wyoming and it will make NY State more welcoming to an industry that's growing and will bring more high paying tech careers to our beautiful State.

Thank You,

Sgt. Crypto/USMC/Blockchain Dev
