To whom it may concern,

Please add **Nano** to the list of cryptocurrencies that is permitted for the Virtual Currency Business Activities of the VC licensees without the prior approval of DFS.

Nano was created in 2015 by Colin LeMahieu, and there was no ICO, there is no mining, there are no earned transaction fees, and there is no expectation of profits. It was given away for free via a CAPTCHA faucet.

Nano's sole purpose to be a decentralized, peer-to-peer, digital cryptocurrency. It has 1) ZERO transaction fees, 2) no mining, 3) near instant transaction times (<1 second for full conf), and 4) it scales on the first layer. It is the fastest cryptocurrency available.

For more information, check out <https://Nano.org>

Regards,

Patrick Luberus
